

## **NOTICE**

### **Subject: Launch and Operationalization of Ikshu Beej Portal for Sugarcane Seed Services**

Date: 1 March 2026

This is to inform all farmers, seed producers, departmental officers, and other concerned stakeholders that the **Ikshu Beej Portal** has been officially launched and is operational from **1 March 2026**. The portal has been developed to provide a digital platform for farmers and other stakeholders to easily access information and services related to sugarcane seed (Ikshu Beej).

The primary objective of the portal is to simplify and streamline the process of sugarcane seed availability, ordering, and information sharing. Through this online system, farmers will be able to access important details regarding different varieties of sugarcane seeds, check their availability, and place orders directly through the portal in a transparent and efficient manner.

Farmers can use the Ikshu Beej Portal to view the list of available sugarcane seed varieties along with their relevant information such as variety name, recommended region, and other important agricultural details. This information will help farmers make informed decisions while selecting suitable seed varieties for cultivation.

In addition to accessing variety information, farmers will also be able to check the **real-time availability of sugarcane seeds** through the portal. The system will provide updated data regarding stock availability at different seed production centers or authorized agencies. This feature will help farmers plan their seed procurement efficiently and avoid unnecessary delays.

The portal also provides the facility for farmers to **place online orders for sugarcane seeds**. After logging into the portal, farmers can select the desired seed variety, check its availability, and submit their order through the system. The submitted orders will be processed by the concerned authorities or seed suppliers as per the prescribed procedures.

The digital platform aims to ensure greater transparency, improved coordination, and better management of sugarcane seed distribution. By digitizing the seed ordering process, the portal reduces manual paperwork and enables efficient monitoring of seed demand and supply across different regions.

All farmers are encouraged to register themselves on the Ikshu Beej Portal and update their profile details to avail the services provided through the system. Registered users will also receive updates and notifications related to seed availability, new varieties, and other relevant announcements issued by the department.

Concerned departmental officials and authorized seed agencies are requested to regularly update seed availability data and provide necessary assistance to farmers using the portal. Their cooperation will ensure the smooth functioning of the system and timely delivery of services to farmers.

In case farmers or other users face any technical difficulties while accessing the portal or placing orders, they may contact the designated technical support team or the concerned departmental office for assistance. Necessary help will be provided to resolve issues and ensure uninterrupted access to the portal services.

All stakeholders are requested to make full use of the Ikshu Beej Portal to facilitate efficient seed management and support the development of the sugarcane sector.

This notice is issued for information and necessary compliance by all concerned.
